

FEEDBACK POLICY

Jamia Nadwiyya Arts and Science College, Edavanna, is dedicated to advancing excellence across all facets of education through a steadfast commitment to continuous enhancement. At the heart of this endeavor lies the Internal Quality Assurance Cell (IQAC), pivotal in realizing this goal by implementing a robust feedback mechanism. This policy underscores the framework for gathering, analyzing, and utilizing feedback to bolster academic quality and overall effectiveness.

Stakeholder Feedback

Feedback from diverse stakeholders plays a fundamental role in shaping institutional progress. The College actively seeks input from several key groups:

Students: Various avenues such as satisfaction surveys, classroom feedback forms, and suggestion boxes are utilized to gather student feedback.

Teachers: Faculty members are encouraged to provide insights through self-appraisal reports, peer evaluations, and departmental meetings.

Alumni: Feedback on the relevance and effectiveness of academic experiences is gathered through surveys, online forums, and alumni gatherings.

Feedback Analysis and Action

- Collected feedback undergoes a rigorous analysis process:
- Quantitative data from surveys is statistically analysed to identify trends and patterns.
- Qualitative data from open-ended responses and discussions is thematically analysed to extract key insights.
- Action plans are formulated based on the analysed feedback, addressing identified strengths, weaknesses, and areas for improvement.
- The IQAC monitors the implementation of action plans and evaluates their effectiveness.

Information Dissemination and Improvement

- The IQAC prepares periodic reports summarizing feedback analysis and action plans, which are submitted to the College Management and relevant authorities.
- Feedback and action plans are shared with stakeholders through various channels, including the College website, departmental meetings, and student forums.
- The IQAC regularly reviews and updates the feedback policy to ensure its effectiveness in driving continuous improvement.
